

CERTIFIED CLOUD SECURITY PROFESSIONAL

AN ISC² CERTIFICATION

TRAINING DATASHEET

Accelerate your cybersecurity career with the CCSP certification.

Earning the CCSP certification gears you to be able to effectively respond to the ever developing threat of security breaches for your cloud or cloud-based services. With a CCSP, you validate your expertise and become an (ISC)² member, unlocking a broad array of exclusive resources, educational tools, and peer-to-peer networking opportunities.

Prove your skills, advance your career, and gain the support of a community of cybersecurity leaders here to support you throughout your career

COURSE SYNOPSIS

The CCSP Exam Preparation course is an intensive, five day examination preparation program to prepare individuals who are planning to sit for the Certified Cloud Security Professional (CCSP) exam.

The course provides candidates with the techniques and strategies needed to defend against threats and also optimise Cloud Security. Upon completion of this interactive course, individuals will be able to respond to the ever developing threats of security breaches and be able to utilise data discovery and classification technologies, execute secure jurisdictional data protection which is a prominent aim of all cloud servers and cloud-based architectures, that is becoming more apparent with the development of new stringent data protection laws.

With constantly evolving cloud platforms, the importance of Cloud Security is continually elevating for organisations. This certification prepares delegates in order to ensure that they can implement secure cloud structures within their own organisation.
